PAW

PET ADOPTION AND CARE SYSTEM

Introduction • Scope • Limitations

A centralized digital platform for animal welfare organizations

Helping every animal move toward a safe, loving home.

Introduction

What is PAW?

PAW is a web-based Pet Adoption and Care System designed to help animal shelters, rescue groups, and pet welfare organizations manage animal records and adoption activities in one centralized platform.

MAIN PURPOSE

To improve the adoption process while keeping each animal's health, safety, and care history properly documented—from rescue and intake through adoption and follow-up.

The system supports both animal care management and responsible pet adoption.

Scope of the System

ANIMAL RECORDS

- Register rescued or surrendered animals
- Store animal details, photos, and current status
- Maintain medical and care records

ADOPTION PROCESS

- Display pets available for adoption
- Allow potential adopters to submit applications
- Support staff review and application decisions

MANAGEMENT & TRACKING

- Track adoption progress and animal status
- Record vaccinations, treatments, and care notes
- Support follow-ups and basic reports

Users and System Workflow

Shelter / Rescue Staff

Manage animal profiles, care records, applications, and adoption updates.

Potential Adopters

Browse available pets, submit applications, and check application progress.

BASIC WORKFLOW

1. Rescue & Intake
2. Care & Monitoring
3. List for Adoption
4. Application
5. Review & Match
6. Adoption & Follow-up

Limitations

Internet and device access

Users need a suitable device and internet connection to access the web-based system.

Accuracy depends on users

Animal profiles, medical updates, and application details depend on information entered by staff and adopters.

No automatic medical diagnosis

The system stores health information but does not replace veterinary examination or professional advice.

Adoption decisions remain human-led

The system can organize and track applications, but staff must evaluate suitability and make final decisions.

Follow-up depends on participation

Post-adoption updates and reminders are only useful when staff and adopters provide the required information.

PAW supports the process; it does not replace professional veterinary care or human judgment.

PAW

A better-organized path to responsible adoption.

By bringing animal records, care information, and adoption activities together, PAW helps organizations work more efficiently and support better outcomes for animals.

THANK YOU
